File transfers between bank and corporation a hassle?

Now there's TreasuryAgent.

Client-side software for secure automated file up/downloading with bank cash management websites.
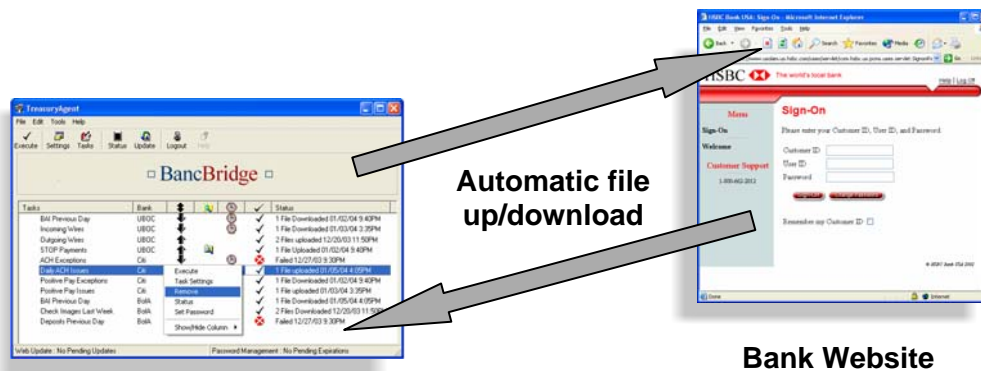

▫ **Banc**Bridge ▫

BancBridge's TreasuryAgent performs automatic transfers between corporate treasury systems and bank websites, including information reporting and transaction initiation. No modem/TTY or FTP. Fast, simple, inexpensive and secure!

Eliminate the hassle with TreasuryAgent

No matter how attractive and easy to use your bank website is, corporate clients do not like to log onto it to perform their cash management duties. Corporate clients demand the ability to automatically exchange information and transactions between their bank and their treasury workstations, recon engines, cash forecasting tool, A/R and A/P systems. As a result, clients cling to modem/TTY systems or worse, the bank has to deploy expensive and problematic FTP sites. BancBridge TreasuryAgent makes it easy to automatically exchange data and transactions between the bank's current web-based cash management system and corporate client systems, with no modifications or technical assistance. Just like the old ProComm Plus or CrossTalk-type technology, BancBridge TreasuryAgent "dials" up the bank website and does the banking automatically!
